The knowledge and tools NASA has developed to study life on Earth will be a great asset to the study of planets beyond our solar system. Our Living Planet Shapes the Search for Life Beyond Earth | NASA

Life on Other Planets - Universe Today
The answer is yes, and the next-best shot at finding extra-terrestrial life forms is on Europa, a moon of the planet Jupiter. Right now, there is no other body in the solar system that attracts as much scientific attention as this bright strange-looking moon, the smallest of Jupiter's four large satellites.

Extraterrestrial life - Wikipedia
And the search for signs of extraterrestrial life is stretching to the depths of our solar system and beyond. Europa. The gas giant Jupiter, the next planet beyond Mars in the solar system, is inhospitable to life in any currently imaginable form. But its icy moons - especially Europa - have potential.

Life on Other Planets - Wikipedia
Is there life on other planets? The ultimate goal of NASA's exoplanet program is to find unmistakable signs of current life on a planet beyond Earth. How soon that can happen depends on two unknowns: the prevalence of life in the galaxy and how lucky we get as we take those first, tentative, exploratory steps.

About | Astrobiology
Most of us, at some point in life, must have pondered over the eternal query of the existence of life on other planets. Are we the only ones in the depths of this endless ocean called the Universe? Read this UniverSavvy article to know more about the endless list of possibilities that reside somewhere in the corners of our imagination.

A New Test for Life on Other Planets | NASA
Now that we know planets are common in our galaxy, how would we tell if one holds life? Sure, it will take incredibly powerful telescopes and ambitious new space missions, but what are we looking for?

Life On Other Planets
Life on Earth requires water as a solvent in which biochemical reactions take place. Sufficient quantities of carbon and other elements, along with water, might enable the formation of living organisms on terrestrial planets with a chemical make-up and temperature range similar to that of Earth.

What are the chances of life on another planet?
Astrobiology is the study of the origin, evolution, and distribution of life in the universe. Written by Marc Kaufman Ask most any American whether life exists on other planets and moons, and the answer you'll get is a confident "yes!"

Our Living Planet Shapes the Search for Life Beyond ... - NASA
A simple chemistry method could vastly enhance how scientists search for signs of life on other planets. A simple chemistry method could vastly enhance how scientists search for signs of life on other planets.

What Is The Statistical Probability Of Life On Other Planets?
Many habitable environments. Oceans covered much of Mars in the ancient past, and seasonal dark streaks observed on the Red Planet's surface today may be caused by salty flowing water. Further, NASA's Curiosity rover has found carbon-containing organic molecules and "fixed" nitrogen, basic ingredients necessary for Earth-like life, on the Martian surface.
