4. Veterinary Toxicology. It is the specialised branch of toxicology which deals with the study, diagnosis and treatment of various toxic compounds present in the animal kingdom. 5. Environmental Toxicology. It deals with the ill-effects of environmental toxicants on human, animal, plants and on the environment itself.

#### EMT Chapter 19 Toxicology Flashcards | Quizlet

It is the nature of these other substances that is of concern, as they are predominately other CNS depressants. In nearly half of cases, toxicology indicated the concomitant use of benzodiazepines other than alprazolam. The use of multiple benzodiazepines is of clinical concern due to the additive depressant effects upon respiration (Baselt, 2011). Similarly, in two thirds of cases opioids were present, including nearly 90% of toxicity cases, and alcohol in a third.

#### Central Depressant Agent - an overview | ScienceDirect Topics

Central nervous system depression. Central nervous system depression or CNS depression refers to physiological depression of the central nervous system that can result in decreased rate of breathing, decreased heart rate, and loss of consciousness possibly leading to coma or death. CNS depression is specifically the result of inhibited brain activity.

#### Read Toxicology Of Cns Depressants

The life-threatening effects of barbiturate poisoning include depression of the centers in the CNS that control respiration and blood circulation. Some barbiturates, for example phenobarbitone, can also induce the synthesis of monoxygenase enzymes and so, by altering the rate or route of metabolism of other drugs, can alter their toxicities.
